

Portable Gas Analyzer PG-250

A single portable analyzer capable of measuring five components with the same methods used by permanent CEMS.

HORIBA

The First Advanced Gas

A single analyzer capable of measuring five components

The HORIBA PG-250 is a highly reliable and versatile gas analyzer for compliance testing of NOx, SO₂, CO, CO₂, and O₂, housed in a single lightweight and fully portable case. Unlike other portable gas analyzers that rely upon electro-chemical sensors, the HORIBA PG-250 utilizes the same measurement principles as a permanently installed CEMS. These include NDIR (pneumatic) for CO and SO₂; NDIR (pyrosensor) for CO₂; Chemilluminescence (cross flow modulation) for NOx; and Galvanic Cell for O₂ measurements.

More importantly, the HORIBA PG-250 meets or exceeds the regulatory requirements established by agencies such as the EPA in the U.S. for portable or backup continuous emission monitoring systems.

Compact and lightweight

The PG-250 is capable of intermittent or continuous measurement of five components simultaneously. The compact and lightweight case, with a built-in carrying handle, is as easy to transport as a suitcase. Thus, the PG-250 is ideal for moving between several stacks at a single plant or for carrying across the country to measure clusters of stack emissions at multiple locations.

SPECIFICATIONS

Built-in sampling unit

The HORIBA PG-250 consists of a sample probe, drain separator and gas analyzer. The built-in sampling system consists of a filter, an acid mist catcher, a sampling pump, an electronic cooler for removal of water vapor, a solenoid valve for autodraining, an NOx to NO converter and a scrubber to remove internally generated ozone from the instrument exhaust.

Simple to operate, easy to read

A major feature of the PG-250 is its ease of operation and large, easy-to-read front panel displays. Screens can be selected from a menu or appropriate screens and messages will appear automatically during operation.

Measurement screen

Concentrations for five components, along with the sample flow rates, are indicated simultane- ously on the LCD. Raw measurements are auto-	000 00 00 000 000	NO: SO: CO CO: O:
measurements are auto- matically adjusted for	E Cher	Lang rise hill

"WARM-UP" screen

oxygen concentration. Indicates that the power has recently been turned on. When ready, "MEASUREMENT" is displayed. (Forced measurement is possible in the WARM-UP mode.)

Calibration screen

Indicates the analyzers range, and zero and span calibration information for all components with calibration commands.

Others screens and messages are:

Parameter setting: To set O2 concentration to be used to correct the measured values for NOx and SO2 and to set the measurement arranging time. (10 or 30 s)

Battery drained: Memory back up battery needs to be replaced. Purge: In process, completed

Drain discharging Display: Reset the number of operating days.

Optional electronic cooler

To measure sample gases that contain greater than 20% by volume concentrations of water vapor, such as those encountered during continuous monitoring of internal gas turbins, boilers, waste incinerators incineration, etc., an optional sample gas pre-conditioning unit, called an "electronic cooler," is available. This accessory is recommended when the instrument will be sampling stack gases continuously for longer than eight hours. (Max. 3 days)

Model	PG-250
Components Measured	NOx/SO ₂ /CO/CO ₂ /O ₂ (5 components)
Analysis Principle	NOx : Chemiluminescence Detection method (CLD) SO ₂ /CO/CO ₂ : Non-dispersive Infrared Absorption (NDIR) O ₂ : Galvanic Cell
Certification	TÜV Rheinland 936/809014
Ranges	$\begin{array}{l} NOx : 0 \ to \ 25/50/100/250/500/1000/2500 \ ppm, \ 7 \ ranges \\ SO_2 : 0 \ to \ 200/500/1000/3000 \ ppm, \ 4 \ ranges \\ CO : 0 \ to \ 200/500/1000/2000/5000 \ ppm, \ 5 \ ranges \\ CO_2 : 0 \ to \ 5/10/20 \ vol\%, \ 3 \ ranges \\ O_2 : 0 \ to \ 5/10/25 \ vol\%, \ 3 \ ranges \end{array}$
Repeatability	±0.5% of F.S. (NOx: ≧ 100ppm range CO: ≧ 1000 ppm range) ±1.0% of F.S.
Linearity	±2.0% of F.S.
Drift	±1.0% of F.S./day (SO2: ±2.0% of F.S./day)
Response Time (T90)	45 s or less SO ₂ Only : 240 s or less
Sample Gas Flow Rate	Approx. 0.4 L /min
Display	Measured value (3 or 4 digits) active, range, flow rate
Output	DC 4 to 20 mA (Nonisolated), RS-232C interface
Ambient Temperature	5 to 40°C
Ambient Humidity	80% or less (up to 31 $^\circ$ decreasing linearly to 50% relative humidity at 40 $^\circ$)
Altitude	2000 m
Power	100 to 120 V AC, 200~240 V AC 50/60 Hz
Power Consumption	250 VA/400 VA
Dimensions	260 (W) \times 510 (D) \times 260 (H) mm \checkmark 10.2 (W) \times 20.0 (D) \times 10.2 (H) in
Mass	Approx. 17 kg/37.4 lbs
Sample Gas Condition	Temperature : Less than 40°C H ₂ O Content : Saturated or less at ambient temperature Dust : 0.1 g/m ³ or less Pressure : +0.98 kPa

Analyzer in a Portable Case.

Required when the H₂O content of the sample gas is > 20% by volume and when the instrument will be sampling stack gases continuously for more than

When Cl₂ is included in the incinerator, this scrubber is required to protect the analyzer sample cells and piping from corrosion.

The number of applications for gas analyzers (for example, studying global environmental problems resulting from combustion exhaust. research on energy conservation, and research on catalyst and control gas concentrations in process gas) has been steadily growing.

Major application

Boilers Gas turbines Refineries Waste incinerators **Electric utilities**

Major uses

CEMS backup **Emissions testing** Combustion efficiency Pollution control systems Relative accuracy test audits

Choose the best combination for each application.
